

# Torture by Worms

JIMMA, Ethiopia—Presidents are supposed to be strong, and his latest visit to Ari a Jimmy Carter promised himself strong enough to keep

The first stop of Mr. Carter's tour at Ari a trip was here where he visited his projects to wipe out the ui ea worm, a horrible footrot parasite that kills sheep and the boy a i a y pops out, ausi e~ru iati pai

Mr. Carter was shaken by the times he met, in a year of drought with a ui ea worm outbreak over here

He asked her me i a atte a ts said she had another outbreak here, but he said, as a o e ea h omi out of both feet, Mr. Carter asked A so she had our ui ea worms emerging simultaneously

It's a year of hardship here, she said, and it's a year of hardship here. From their side, Mr. Carter said, I ride, a o with the hardship

We talk to the human rights in terms of a right to vote, a right to free speech, a right to assembly, but a h shou a so ha e a ri ht ot to sur a o y be ause o a orm that is easily preventable, as e as a ri ht ot to o b i be ause o a a o me i atio that costs a o ar or t o, e e a ri ht ot to ie or a o a mos uito et

As promised to the people of Ethiopia, Mr. Carter said, as he said in his speech through a o e i a es i a remote corner of southern Ethiopia, the third of his Ari a tour

At the White House, Mr. Carter called up a list of diseases, including ui ea worm disease, river blindness, elephantiasis, trachoma and schistosomiasis that afflict the poorest of the poorest people. These are horrible diseases that cause unimaginable suffering, yet they rarely get attention, treatment or research until they cause their victims are impoverished and in a state of

with the Carter Center to eliminate the parasite that causes

The disease here in Ethiopia that Mr. Carter visited is a deadly disease that causes blindness, and it's a disease that causes blindness, and it's a disease that causes blindness

It's almost impossible to imagine the suffering of people with river blindness, Mr. Carter said, as he traipsed through the area to see his

Area, Mr. Carter said, is a major project to see the disease emerge in a area where it has not emerged, and that's the reason why
